SUMMARY

Software engineering graduate (McMaster University) and AWS Certified Machine Learning Engineer – Associate, with hands-on experience designing and building full-stack and mobile applications, data pipelines, and analytics tools in Python and TypeScript.

EDUCATION

McMaster University

Bachelor of Software and Biomedical Engineering

- Dean's Honour List

Sept 2020 – Jun 2025

Hamilton, Ontario

EXPERIENCE

Mercor Intelligence

AI Generalist (Independent Contractor)

- Contributed to projects advancing the development of next-generation AI models, delivering structured analytical work to rigorous quality standards under strict client confidentiality.

May 2026 – Present

Remote

PROJECTS

Centsyve | *React Native, Expo, TypeScript, SQLite*

github.com/yuanq10/Centsyve

- Designed and built an offline-first personal finance app supporting transaction logging across 7 spending categories, recurring bill automation, and monthly spending analytics; packaged as a downloadable Android build via EAS.
- Engineered a bidirectional Google Sheets sync engine detecting and resolving 3 classes of sync conflicts to safely reconcile concurrent edits, plus CSV/Excel import-export pipelines for full data portability.
- Created interactive spending visualizations (category pivot tables, period-over-period trend charts) and complete English/Mandarin localization.

Nov 2025 – May 2026

Virtual Dragon Boat Coach (Capstone) | *Python, pandas, NumPy, MySQL*

github.com/JamesParkGH/Virtual_Dragon_Boat_Coach

- Collaborated in a 4-person team to develop a Python motion-analysis pipeline (pandas, NumPy) processing 60 FPS pose-estimation data from the OpenCap API to extract stroke counts, joint positions, and joint angles, achieving 90%+ accuracy in flagging technique issues.
- Designed a MySQL-backed web interface for athletes to upload sessions and visualize stroke metrics and feedback, reducing coaches' manual video review; deployed via Docker on Railway.
- Validated the system through 47 pytest unit tests across code modules and 3 rounds of usability testing spanning 20+ recorded runs with athletes.

Sept 2024 – Apr 2025

SKILLS

Languages: Python, TypeScript/JavaScript, Java, SQL (MySQL, SQLite), HTML

ML & Data: Amazon SageMaker, pandas, NumPy, Excel, MATLAB

Cloud & Tools: AWS, Azure, Docker, Git, pytest, Linux

Web & Mobile: React, React Native, Expo, Flask

CERTIFICATIONS

AWS Certified Machine Learning Engineer – Associate (MLA-C01)

Microsoft Certified: Azure AI Fundamentals (AI-900)
