PROFESSIONAL SUMMARY

Software Engineering graduate from McMaster University with hands-on experience building full-stack and mobile applications, data pipelines, and automation tools from architecture through deployment. Proficient in Python, TypeScript/JavaScript, and cloud platforms (Azure, AWS), with a track record of independently shipping functional, production-ready tools — from motion-analysis systems to a cross-platform mobile app with real-world users.

EDUCATION

Bachelor of Software and Biomedical Engineering Sept 2020 – Jun 2025
McMaster University

Capstone Project: Virtual Dragon Boat Coach Sept 2024 – Apr 2025
github.com/JamesParkGH/Virtual_Dragon_Boat_Coach

- Built a motion analysis pipeline in Python that consumes 60 Frames Per Second data from the OpenCap API to evaluate dragon boat athletes' stroke technique and overall form.
- Implemented evaluation algorithms in Python to extract stroke count, joint positions, and joint angles from OpenCap datasets.
- Achieved over 90% accuracy in identifying problematic technique across recorded training sessions.
- Designed a lightweight web interface using Python and HTML to let athletes upload sessions and visualize stroke metrics and feedback, reducing the need for manual video review by coaches.

PROFESSIONAL EXPERIENCE

Generalist May 2026 – Present
Mercor Intelligence (Independent Contractor) - Remote

- Collaborated on projects advancing next-generation AI models by providing structured expertise for model training and evaluation initiatives.
- Applied strong attention to detail and analytical reasoning to produce reliable outputs that supported improvements in AI model performance.

SKILLS

Programming Languages Python, Java, JavaScript, TypeScript, SQL, HTML
Technical Skills Git, Azure, AWS, Linux, PyTorch, MATLAB, Flask, React
Certifications Microsoft Certified: Azure AI Fundamentals (AI-900)

PERSONAL PROJECTS

Centsyve Jul 2026 – Present
github.com/yuanq10/Centsyve

- Designed and built an offline-first personal finance tracking app in React Native, Expo, and TypeScript, supporting transaction logging, recurring bill automation, and monthly spending analytics — packaged and released as a downloadable Android build via EAS.
- Engineered a bidirectional Google Sheets sync engine with custom conflict-detection logic to safely reconcile concurrent edits between mobile and spreadsheet, plus CSV/Excel import-export pipelines for full data portability.
- Built interactive spending visualizations (category pivot tables, trend charts with period-over-period comparisons) and complete English/Mandarin localization for a polished, bilingual user experience.
